

### Scenario

You are part of a SOC team that recently faced a large breach investigation that took ages due to a lack of automation. Your friend, McSkidy, recently advised adopting a SOAR and setting up automation workflows (also called playbooks) to help your security investigations. McSkidy sent you a checklist for a Threat Intelligence integration workflow, and your task is to figure out how it works. Click the **View site** button below to launch the site in split view. To automate the process, use the different screens to activate the elements required for the SOAR workflow. Run and test the workflow until you get a smooth transition on the flowchart to complete the task.
